VERSION WITH MARKINGS TO SHOW CHANGES MADE

In the Detailed Description:

A directory, according to the present invention, achieves this high ranking by advantageously employing related elements in each of the areas where a "typical" search engine locates relevant information. For example, as shown in Fig. 2, if a user was searching for widgets, a widgets directory, constructed according to the present invention, employs a descriptive domain name, such as, <http://www.widgets.com> 12. The present invention also employs the descriptive term or substantially similar descriptive term in the header 14 as well as the first paragraph of the text 16. The directory Web site also provides links to the Web sites of various suppliers who offer goods and services of the type described by the directory as well as a description of the supplier, including address and phone number and typically a written description about the supplier and/or the supplier's product(s) 20a, 20b, 20c, etc. Any type of good or service may be indexed and searched using the present invention. While the present invention is primarily to be used in connection with offering industrial goods or services, any goods or services including goods or services such as, art dealers, toys, antiques, etc., may be indexed according to the present invention as well. Any number of supplier links, including a single supplier link, may constitute a directory web site. However, preferably, multiple supplier links are included on a [duo] directory web site. The links 18a, 18b, 18c, 18d, etc., to various suppliers, are such that when a user's cursor is located over such a link, prior to activation of the link, the window 22, which can be any suitable size and

Page : 11

may or may not have a border, displays more detailed information regarding the specific supplier of the goods or services of the directory, including the supplier's logo, without the user having to activate the link and wait for a new internet page to load into their internet browser. Information about a particular supplier may be displayed using a script language such as, Java®, JavaScript®, Flash® or other similar computer programming language of script.

Streaming video or steaming audio information can also be conveyed. The rollover window is preferably located such that it is readily viewable when the user's cursor is at least substantially over any of the links 18 or the description about the supplier 20 on the directory.

If numerous links 18 are listed, more than one rollover window 22 may be utilized such that a rollover window is readily viewable whenever the user's cursor is placed over any of the links.

In the Claims:

Please add new claims 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, and 48.
